

Gaurav Kumar - Developers Arena Week 3

Interactive Portfolio Website Documentation

Project Description

The Week 2 portfolio has been extended with JavaScript to make the website interactive. The project demonstrates DOM manipulation, event handling, form validation, theme switching, Local Storage and responsive interaction.

Features Implemented

- External script.js linked with index.html
- Reusable JavaScript functions
- DOM manipulation
- Click, submit, input and keyboard event listeners
- Contact form validation with error messages
- Dark/Light mode toggle
- Local Storage for theme preference
- Mobile navigation menu
- Interactive gallery modal
- Dynamic greeting
- Scroll reveal animation
- Responsive layout

Day-wise Work

- 1 Day 1: Create script.js and link it with HTML.
- 2 Day 2: DOM selection and content updates.
- 3 Day 3: Click, hover/input, submit and keyboard events.
- 4 Day 4: Contact form validation with real-time feedback.
- 5 Day 5: Dark/light mode and interactive gallery.
- 6 Day 6: Local Storage for saving theme preference.
- 7 Day 7: Testing, responsive checks and debugging.

How to Run

Open index.html in a modern browser. No server or package installation is required.

Conclusion

The portfolio now satisfies the Week 3 JavaScript requirements and provides a responsive interactive user experience.
