

Gaurav Kumar – Personal Portfolio

Developers Arena – Week 1 Task 1: HTML – Your First Website

1. Project Overview and Objectives

This project is a personal portfolio website created with HTML5 and CSS3. It presents Gaurav Kumar's profile, educational background, technical skills, projects and contact information.

Objectives: Build a valid HTML5 page, use semantic elements, include About/Skills/Contact sections, add navigation, use a local image, provide a contact form and make the layout responsive.

2. Setup and Installation

Download or clone the GitHub repository, open the project folder and open **index.html** in a modern web browser. No external package installation is required.

3. Code Structure Explanation

index.html: Contains the HTML5 structure and embedded CSS. It uses header, nav, main, section, article, aside and footer elements.

images/profile-placeholder.svg: Local profile illustration used by the profile card with descriptive alternative text.

README.md: Contains the project overview, objectives, technologies, folder structure, setup instructions and technical requirements.

4. Portfolio Preview / Screenshot Reference

Gaurav.

[Contact](#)

About • Skills • Projects • Contact

Responsive HTML5 portfolio with semantic elements and a contact form.

Use this project preview as a reference. Before final submission, open index.html in your browser and add one or more real screenshots of the working page to the documentation.

5. Technical Requirements

Requirement	Implementation
HTML5 structure	<!DOCTYPE html>, html, head and body.
About section	Profile and educational background.
Skills section	Skills shown in semantic article cards and lists.
Contact section	Contact details and HTML form controls.
Semantic HTML	header, nav, main, section, article, aside and footer.
Navigation	Internal anchor links to Home, About, Skills, Projects and Contact.
Image	Local image in images/ folder with alt text.
Responsive design	CSS media query for smaller screens.

6. Conclusion

The portfolio covers the required HTML5 structure, semantic elements, required sections, navigation, imagery, form controls, responsive styling and supporting documentation.

7. Final Submission Checklist

- ✓ GitHub repository contains index.html, README.md and images/ folder.
- ✓ Repository link is public/shareable.
- ✓ Documentation link is shareable.
- ✓ Add real browser screenshots to the documentation before submitting.
